All Woody's® stud sizes are measured from the top of the Digger® support plate to the tip of the stud.  
 \* Woody's recommends .250" to .375" to be optimum penetration. Deviating from this recommendation can result in premature track wear, tunnel damage and/or loss of control.

### IMPORTANT!

Review the snowmobile and track manufacturer's studding recommendation in your owner's manual. You may void your warranty if their recommendations are not followed. Consult your snowmobile dealer about added tunnel protection.
