

BULLETIN: The Angled Digger® Support Plate Cannot Be Installed in Preholed Tracks

The openings in preholed manufactured tracks are centered between the lugs. The pattern is designed to accommodate a Woody's® Single Round, Single Square or Single Triangle Digger® support plate. The pattern does not accommodate Double Digger Support Plates or Angled Digger Support Plates.

The opening needed to install the Angled Digger® support plate is offset from the stud installation openings created during manufacturing of the preholed tracks.

Do Not enlarge the hole in the track in an attempt to install Angled Digger® Support Plates in a Preholed track.

Instructions for installing Angled Digger® Support Plates are included in every package. If you do not have the Angled Digger® Support Plate instructions, they are available on www.WoodysTraction.com or call (989) 689-4911. Under Customer Service Reference [Tech Tip WE-08-0012](#) for Angled Digger Installation Instructions.

Always review the snowmobile and track manufacturer's studding recommendations. You may void your warranty if their recommendations are not followed.
