2007 & 2008 Yamaha Phazer Pattern Development with 13.5", 14" & 15" x 128" Template

IMPORTANT -- The Yamaha 2007 and 2008 Phazer models must have tunnel protection installed before studding. Damage to your snowmobile could result if tunnel protection is not installed. Hauck Power Sports and Yamaha have a tunnel protector kit available for the Yamaha 2007-2008 Phazer.

The patterns below can be used after tunnel protection is installed. If you choose to stud your Yamaha Phazer, the pattern options for you to consider are 96 and 144 stud patterns for your 14" x 121" Phazer track. The template to achieve these patterns is the 128-TEMP for 13.5", 14" & 15" x 128". This is the only Woody's template that will accommodate a 14" wide track.

To accomplish the installation of 96 studs, you will use either the 102 Single or 102 Double patterns. The 144 stud pattern can be made from the 153 pattern. The directions that accompany the template will explain how to mark the track to create the pattern. The only modification to these directions is the number of times the pattern is repeated. The 121" Phazer track has three less bars than a 128" track, so you will **only repeat the pattern 16 times** for both the 96 and 144 stud patterns for your Yamaha Phazer 121" track.

Because this is a six bar pattern you will end with two identical patterns together. This will not effect the rotation balance of the track.

If you have any questions about studding, contact your Yamaha Dealer. Questions about the stud pattern contact Woody's.
